Education

VIT-AP University 2022–2026
Bachelor of Technology, Computer Science and Engineering *CGPA: 8.42*

Narayana Junior College 2022
12th Standard *Percentage: 91.8*

Vijaya Convent High School 2020
10th Standard *Percentage: 96.3*

Projects

Quick Hire | *Full-Stack Development, AI-Powered Recruitment Platform* January, 2026 – May, 2026

- Developed an AI-driven recruitment platform that automates resume screening, candidate evaluation, interview scheduling, and hiring workflows using NLP and Large Language Models.
- Implemented AI-powered resume parsing, job-candidate matching, interview question generation, and candidate scoring, achieving over 91% resume extraction accuracy.
- Built role-based dashboards, real-time video interview integration, analytics reporting, and secure authentication with MFA to streamline end-to-end hiring processes.

Global Landslide Prediction | *AIML* July, 2025 – December, 2025

- Developed a CNN-BiLSTM model achieving 91 percent accuracy by fusing spatial terrain data with temporal rainfall sequences. Optimized the imbalanced dataset to achieve a 0.88 F1-score.
- Built interactive 128×128 resolution susceptibility maps using Plotly and Folium. Validated model predictions against NASA's Global Landslide Catalog for disaster response support.
- Integrated heterogeneous geospatial data including DEM, soil moisture, and NDVI vegetation indices. Implemented sliding window sequences and feature scaling for temporal analysis.

Ticket Support System | *MERN* May, 2025 – July, 2025

- Developed a responsive ticketing system using the MERN stack (MongoDB, Express, React, Node.js), featuring secure JWT-based authentication and a RESTful API for real-time ticket management.
- Engineered a comprehensive admin dashboard to track ticket statuses (New, Open, Closed) and integrated a nested comment system to facilitate seamless communication between users and support staff.

Road Scenes Understanding in Autonomous Driving | *ML, DL* July, 2024 – Dec, 2024

- Implemented a custom object detection pipeline for autonomous driving scenarios by integrating YOLO models and faster R-CNN. Achieved superior performance over pre-trained models.

Other Projects

- Diabetes Prediction
- Railway Reservation Management System

Technical Skills

Languages: Java, SQL, Python
Frameworks Used: Node.js, React, Express, MongoDB
Developer Tools: GitHub, Oracle MySQL, Cisco
Applications: Jupyter notebook, Google Colab, VS Code, Kaggle

Certifications

MERN Full Stack Development
Oracle Gen AI Professional
